DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-16, 27 and 29, drawn to amyloid fibrils.

Group II, claim(s) 17-26, drawn to methods of making amyloid fibrils.

Group III, claim(s) 28, drawn to method of using a fibril to make plastics, electronics or in catalysis.

Group IV, claim(s) 30-32, drawn to therapeutic methods of administering fibrils.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The PCT rules define a special technical feature as a feature which defines a contribution over the prior art. The first claimed invention is an amyloid fibril substantially free of other protein. Such are well known in the prior art. For example, US 4666829 discloses an isolated amyloid fibril. Therefore, since the first claimed invention does not have a special technical feature, it cannot share a special technical feature with the other claimed inventions. Furthermore, search and consideration of the methods of Groups II and III would present an undue search burden on the examiner, since the method steps themselves would have to be searched.

FURTHERMORE, This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention

Art Unit: 1646

because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- a) A β peptide associate with Alzheimer's disease;
- b) prion protein associated with transmissible spongiform encephalopathies;
- c) islet-associated polypeptide associates with type II diabetes;
- d) transthyretin and fragments thereof associated with familial amyloidotic polyneuropathy; and
- e) a specific protein associated with a specific amyloidosis.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: claim 1 is exemplary.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each peptide or protein listed above

Art Unit: 1646

makes its own contribution to the prior art. Therefore, they cannot share a special technical feature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
